

Dear Students, Colleagues and Friends,

I was glad to hear from several of you after I sent out the job listing of Sustainability Director for Nashville's new Convention Center. It's good to know that Lipscomb's graduates will be well represented – and hopefully (surely!) will prevail in that selection.

And speaking of being represented, I was contacted recently by Yes! Magazine to be part of a little article on biomimicry. They gave me a byline but they really wrote it. I just answered a few questions. Still, it was a great opportunity to highlight a couple of past students' projects. Of particular note were two of the photos they selected: one taken by **Teresa Wade** for her team's (**she, Jerry Faber & Coe Foutch**) biomimetic work with apartment doors and one of **Lucas Gibbs** for his team's (**he and Keegan Brown**) work on refugee housing. Go Lipscomb Bison!

Biomimicry keeps moving forward in business *and* our curriculum. You'll notice a third picture taken by Jim Pascoe of a scouting trip we did down the Ghost River for a Biomimicry Fieldwork class we'll be offering beginning the summer of 2014. Stay tuned! We might even let non-students take this one and we'd love to have you!

Meanwhile, here's a link to the story, "[How Does Nature Do That?](http://www.yesmagazine.org/for-teachers/teacher-stories/how-does-nature-do-that)" <http://www.yesmagazine.org/for-teachers/teacher-stories/how-does-nature-do-that>

Best to you all,

Margo
